Description

Wind deflectors are a great example of an ideal accessory for your vehicle. Wind deflectors are an ever popular product providing a functional use.

Wind deflectors for your vehicle:

Allows air flow without gusts of unwanted wind

Deflects rain whilst the window remains open

Lightly tinted to reduce glare

Ideal if you have dogs

Car wash friendly

Set of two front wind deflectors

Wind deflectors allow you to leave the windows of your vehicle open while you are driving and not have the problem of excessive wind blasting through your car.

With wind deflectors fitted you can even leave your windows open when it's raining. Usually, if you open the window when it rains the water pours in and the interior trim and electric window switches in your vehicle can be ruined. With wind deflectors, you can still open your windows enough to allow a cool air flow but any rain will be deflected keeping the interior of your car dry and clean.

If you have dogs wind deflectors are particularly ideal. When leaving the dogs in the car you need to leave the windows open enough to allow fresh air into your vehicle but it's a worrying thought that everyone else can see that the windows are partially open too. Wind deflectors allow you to open the window a couple of inches to let enough fresh air flow in but nobody can see that the window is open at all.

These adhesive wind deflectors are applied to your vehicle using adhesive automotive tape. The adhesive is strong and will secure your wind deflectors for as long as you require to keep them on your car. Although the wind deflectors won't come off easily with a tug, all you need to do to remove them is apply heat, for example, using a heat gun or hairdryer.
