Description

We have a full range of tow bars that are EU Type approved for on-road use throughout Europe and beyond. Our tow bars are designed to have a towing capacity that far exceeds the maximum towing capacity of any vehicle you install it on. They are also designed for an extremely rudimentary installation process. Each vehicle specific tow bar comes with a plug and play electrical wiring system. Just a few bolts, plugging in of the applicable harness and you are ready to tow. It is that simple.
