Description

Our roller tonneau cover is a retractable pick-up bed cover designed to protect the contents of your load bed from the elements. This tonneau cover is perfect for keeping the contents of your truck's load bed dry and safe.

If you have awkward or large loads to work with, adding a roller tonneau cover to your vehicle means that you no longer have to leave your loadbed fully exposed or wrestle with tonneau covers while loading your vehicle. You can simply lock the roll cover in the desired position and load everything you need into your truck.

Our roll top cover is made from strong, interlocking ArmorTek panels which are laminated to weather resistant padded polymer. A roll bar can be added as an optional extra if required. This quality design ensures maximum customer satisfaction.

For many vehicles, this product is also available in a motorized remote control version which allows for effortless opening and closing of the cover. The cover also has a manual override feature so that in the event of a dead battery or some other malfunction the top can still be open via the use of a key.
