Description

Our skid plate selection allows you to choose how much protection you want. You can choose from a single plate version to a six plate version depending on your requirements and vehicle type. All of our skid plates are designed to allow for maintenance access to drain plugs, grease fittings, and any other preventative maintenance point shrouded by the plates. Our single sector option provides protection to the radiator and front of engine compartment. Our double sector option provides protection to the radiator and the entire engine compartment. Our triple sector option provides protection to the radiator, the entire engine compartment, transmission and transfer case (where applicable). The number of plates required to provide protection to each particular sector is mandated by the vehicle type and model.

Set Includes:

Rear Differential Skid Plate: Our Limitless® Rear Differential Skid Plate protects your differential from damage that may occur when off-road driving due to impacts on hard objects such as stumps and rocks. This small investment can save you a great deal of money in the event of an impact to the differential as most differentials are not repairable and if damaged the entire rear axle would need to be replaced.

Fuel Tank Skid Plate: Our Limitless® Fuel Tank Skid Plate protects your fuel tank from damage that may occur when off-road driving due to impacts on hard objects such as stumps and rocks. This small investment can save you a great deal of money in the event of an impact to the fuel tank as most fuel tanks are not repairable and if damaged the entire tank would need to be replaced.

Transfer Case Skid Plate: Our Limitless® Transfer Case Skid Plate protects your transfer case from damage that may occur when off-road driving due to impacts on hard objects such as stumps and rocks. This small investment can save you a great deal of money in the event of an impact to the transfer case as most transfer case housings are not repairable and if damaged the entire transfer case housing would need to be replaced.

Transmission Skid Plate: Our Limitless® Transmission Skid Plate protects your transmission case from damage that may occur when off-road driving due to impacts on hard objects such as stumps and rocks. This small investment can save you a great deal of money in the event of an impact to the transmission case as most transmission case housings are not repairable and if damaged the entire transmission case housing would need to be replaced.

Radiator And Engine Compartment Skid Plate: Our Limitless® Radiator And Engine Compartment Skid Plate protects your radiator and engine, specifically oil pan, from damage that may occur when off-road driving due to impacts on hard objects such as stumps and rocks. This small investment can save you a great deal of money in the event of an impact to the radiator as a leak in the radiator can cause engine overheating and not only create the possibility of leaving you stranded, but possible severe damage to the engine due to excessive overheating. If damage to the oil pan occurs there is a high probability that the loss of oil will go unnoticed until the oil pressure has dropped to a point where severe damage to the entire engine is eminent. This is literally thousands of Euros to repair and may possibly require an engine replacement.
